# 1. Safety information

Safe operation of these products can only be guaranteed if they are properly installed, commissioned, used and maintained by qualified personnel (see Section 1.11) in compliance with the operating instructions. General installation and safety instructions for pipeline and plant construction, as well as the proper use of tools and safety equipment must also be complied with.

## Fig 3616 Food+ DN15 to 100, EC1935/2004 version, safety instructions

Fig 3616 Food+ DN15 to 100, EC1935/2004 version is intended to be connected into a system that can operate an EC1935 compliant process.

To minimise the risk of non-intentionally added substances in the system, it is essential that an appropriate CIP (cleaning in place) cycle is carried out by the end user prior to first use in a food contact application.

A list of the materials that could come directly or indirectly into contact with foodstuffs can be found in the Declaration of Compliance available for this product.

### 1.1 Intended use

Referring to the Installation and Maintenance Instructions, name-plate and Technical Information Sheet, check that the product is suitable for the intended use/application.

The products listed below comply with the requirements of the EU Pressure Equipment

Directive/UK Pressure Equipment (Safety) Regulations and carry the  /  mark when so required.

The products fall within the following Pressure Equipment Directive and Safety Regulations categories:

Product		Group 1 Gases	Group 2 Gases	Group 1 Liquids	Group 2 Liquids

- i) These products have been specifically designed for use on steam, air or water /condensate as stated in Groups 1 and 2 of the above mentioned Pressure Equipment Directive. The products' use on other fluids may be possible but, if this is contemplated, Spirax Sarco should be contacted to confirm the suitability of the product for the application being considered.
- ii) Check material suitability, pressure and temperature and their maximum and minimum values. If the maximum operating limits of the product are lower than those of the system in which it is being fitted, or if malfunction of the product could result in a dangerous overpressure or overtemperature occurrence, ensure a safety device is included in the system to prevent such over-limit situations.
- iii) Determine the correct installation situation and direction of fluid flow.
- iv) Spirax Sarco products are not intended to withstand external stresses that may be induced by any system to which they are fitted. It is the responsibility of the installer to consider these stresses and take adequate precautions to minimise them.
- v) Remove protection covers from all connections and protective film from all name-plates, where appropriate, before installation on steam or other high temperature applications.
- vi) Prior to use, the user shall ensure the fluid compatibility with the equipment material.

## 1.2 Access

Ensure safe access and if necessary a safe working platform (suitably guarded) before attempting to work on the product. Arrange suitable lifting gear if required.

## 1.3 Lighting

Ensure adequate lighting, particularly where detailed or intricate work is required.

## 1.4 Hazardous liquids or gases in the pipeline

Consider what is in the pipeline or what may have been in the pipeline at some previous time. Consider: flammable materials, substances hazardous to health, extremes of temperature.

## 1.5 Hazardous environment around the product

Consider: explosion risk areas, lack of oxygen (e.g. tanks, pits), dangerous gases, extremes of temperature, hot surfaces, fire hazard (e.g. during welding), excessive noise, moving machinery.

## 1.6 The system

Consider the effect on the complete system of the work proposed. Will any proposed action (e.g. closing isolation valves, electrical isolation) put any other part of the system or any personnel at risk?

Dangers might include isolation of vents or protective devices or the rendering ineffective of controls or alarms. Ensure isolation valves are turned on and off in a gradual way to avoid system shocks.

## **1.7 Pressure systems**

Ensure that any pressure is isolated and safely vented to atmospheric pressure. Consider double isolation (double block and bleed) and the locking or labelling of closed valves. Do not assume that the system has depressurised even when the pressure gauge indicates zero.

## **1.8 Temperature**

Allow time for temperature to normalise after isolation to avoid danger of burns.

## **1.9 Tools and consumables**

Before starting work ensure that you have suitable tools and/or consumables available. Use only genuine Spirax Sarco replacement parts.

## **1.10 Protective clothing**

Consider whether you and/or others in the vicinity require any protective clothing to protect against the hazards of, for example, chemicals, high/low temperature, radiation, noise, falling objects, and dangers to eyes and face.

## **1.11 Permits to work**

All work must be carried out or be supervised by a suitably competent person.

Installation and operating personnel should be trained in the correct use of the product according to the Installation and Maintenance Instructions.

Where a formal 'permit to work' system is in force it must be complied with. Where there is no such system, it is recommended that a responsible person should know what work is going on and, where necessary, arrange to have an assistant whose primary responsibility is safety.

Post 'warning notices' if necessary.

## **1.12 Handling**

Manual handling of large and/or heavy products may present a risk of injury. Lifting, pushing, pulling, carrying or supporting a load by bodily force can cause injury particularly to the back. You are advised to assess the risks taking into account the task, the individual, the load and the working environment and use the appropriate handling method depending on the circumstances of the work being done.

## **1.13 Residual hazards**

In normal use the external surface of the product may be very hot. If used at the maximum permitted operating conditions the surface temperature of some products may reach temperatures of 300 °C (572 °F).

Many products are not self-draining. Take due care when dismantling or removing the product from an installation (refer to 'Maintenance instructions').

## **1.14 Freezing**

Provision must be made to protect products which are not self-draining against frost damage in environments where they may be exposed to temperatures below freezing point.

## **1.15 Disposal**

Unless otherwise stated in the Installation and Maintenance Instructions, this product is recyclable and no ecological hazard is anticipated with its disposal providing due care is taken.

Please visit the Spirax Sarco product compliance web pages:

<https://www.spiraxsarco.com/product-compliance>

for up to date information on any substances of concern that may be contained within this product. Where no additional information is provided on the Spirax Sarco product compliance web page, this product may be safely recycled and/or disposed providing due care is taken. Always check your local recycling and disposal regulations.

## **1.16 Returning products**

Customers and stockists are reminded that under EC Health, Safety and Environment Law, when returning products to Spirax Sarco they must provide information on any hazards and the precautions to be taken due to contamination residues or mechanical damage which may present a health, safety or environmental risk. This information must be provided in writing including Health and Safety data sheets relating to any substances identified as hazardous or potentially hazardous.

## **1.17 Working safely with cast iron products on steam**

Cast iron products are commonly found on steam and condensate systems. If installed correctly using good steam engineering practices, it is perfectly safe.

However, because of its mechanical properties, it is less forgiving compared to other materials such as SG iron or carbon steel. The following are the good engineering practices required to prevent waterhammer and ensure safe working conditions on a steam system.

### **Safe Handling**

Cast Iron is a brittle material. If the product is dropped during installation and there is any risk of damage the product should not be used unless it is fully inspected and pressure tested by the manufacturer.

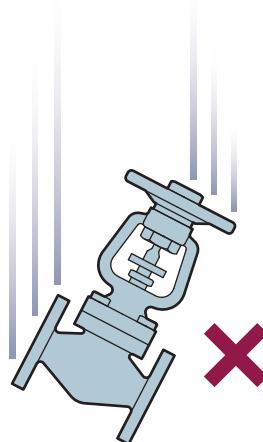

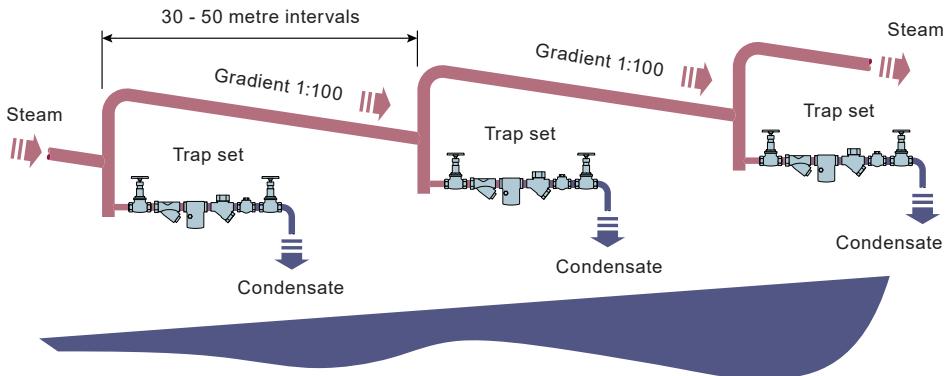

Fig 7, 33, 33.1, 34, 34HP, 36, 36HP, 37, 3616, Fig 3716 and Fig 3616 Food+ Flanged Strainers

## Prevention of waterhammer

Steam trapping on steam mains:

## Steam Mains - Do's and Don'ts:

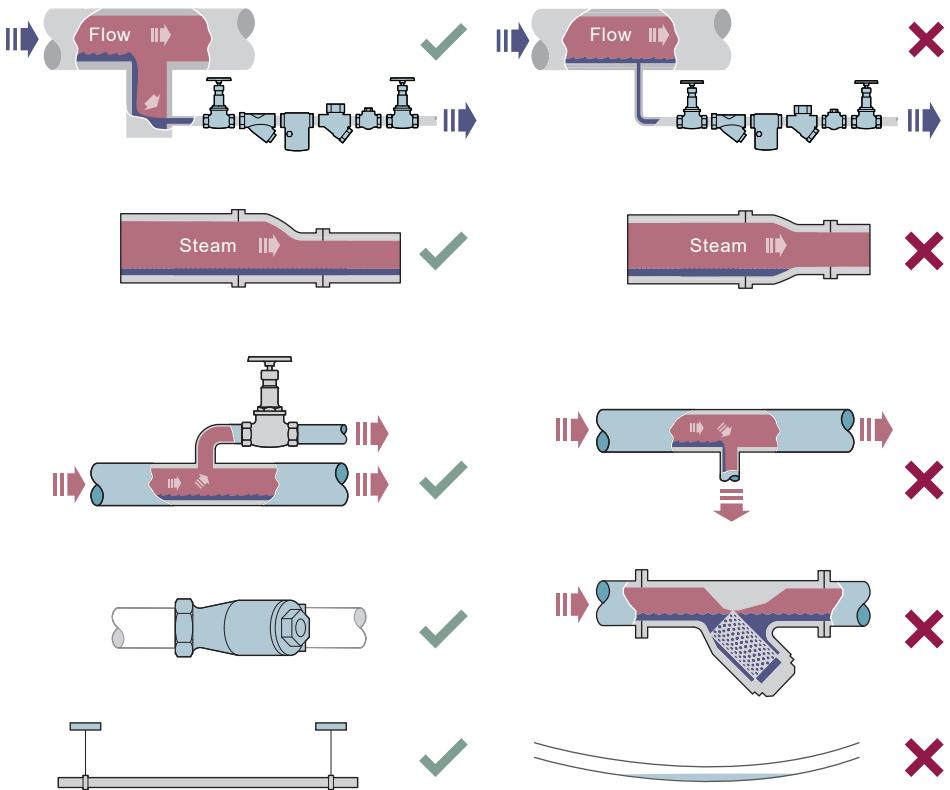

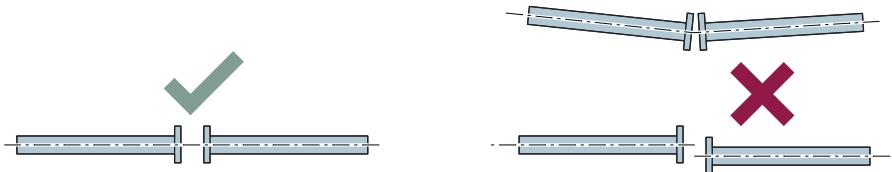

Fig 7, 33, 33.1, 34, 34HP, 36, 36HP, 37, 3616, Fig 3716 and Fig 3616 Food+ Flanged Strainers

## Prevention of tensile stressing

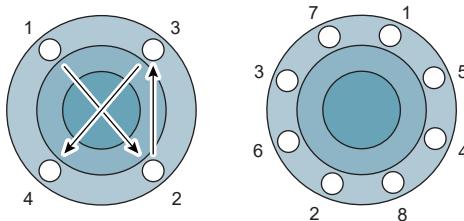

Pipe misalignment:

Installing products or re-assembling after maintenance:

Do not over tighten.  
Use correct torque figures.

Flange bolts should be gradually tightened across diameters to ensure even load and alignment.

Prevention of tensile stressing continued on next page

## 2. General product information

### 2.1 General description

The products detailed below are all strainers with flanged connections. They are used to protect other pipeline items from damage due to debris and dirt in the system. The Fig 7 strainer is a pot type design - all the others are Y-type designs. The standard stainless steel screen in the DN15 to DN80 sizes has 0.8 mm perforations. In the DN100 to DN200 sizes, they have 1.6 mm perforations. The Fig 7 is fitted with 3.2 mm perforations only (no optional extras are available for the Fig 7). Optional screens are available for the Y-type strainers only, see Section 2.2.

**Note:** For additional information see the following Technical Information Sheets:

## 2.3 Pressure/temperature limits (ISO 6552)

Note: Values for PMA and TMA are not concurrent for exact operating limits.

**Fig 7**

Body design conditions	PN16	
PMA - Maximum allowable pressure	16 bar g	(232 psi g)
TMA - Maximum allowable temperature	300 °C	(572 °F)
Minimum operating temperature	0 °C	(32 °F)
Designed for a maximum cold hydraulic test pressure of:	28 bar g	(406 psi g)

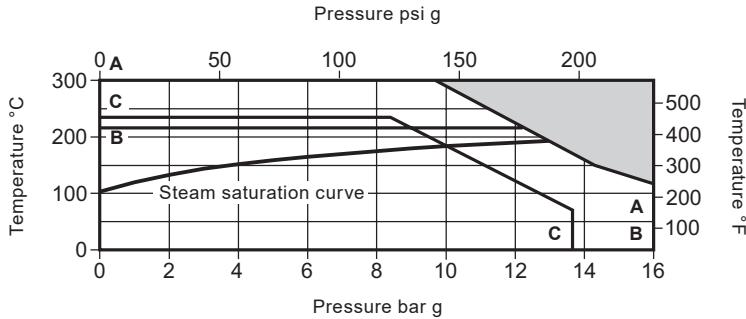

The product **must not** be used in this region.

**A - A** Flanged EN 1092 PN16

**B - A** Flanged ASME 150

**Fig 33**

Body design conditions		PN16
PMA	Maximum allowable pressure	16 bar g (232 psi g)
TMA	Maximum allowable temperature	300 °C (572 °F)
Minimum operating temperature		0 °C (32 °F)
Designed for a maximum cold hydraulic test pressure of:		24 bar g (348 psi g)

The product **must not** be used in this region.

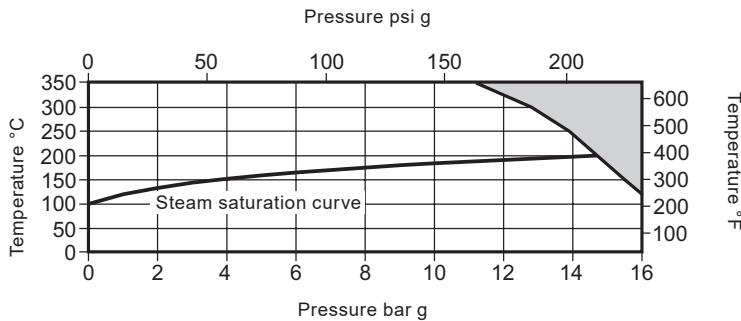

**A - A** Flanged EN 1092 PN16

**B - B** Flanged AS 2129 Table F

**C - C** Flanged ASME 125 (including DN15, DN20 flanged ASME 150)

**Fig 33.1**

Body design conditions		PN16
PMA	Maximum allowable pressure	16 bar g (232 psi g)
TMA	Maximum allowable temperature	350 °C (662 °F)
Minimum allowable temperature		-10 °C (14 °F)
PMO	Maximum operating pressure for saturated steam service	14.7 bar g (213 psi g)
TMO	Maximum operating temperature	350 °C (662 °F)
Minimum operating temperature		-10 °C (14 °F)
Designed for a maximum cold hydraulic test pressure of:		24 bar g (348 psi g)

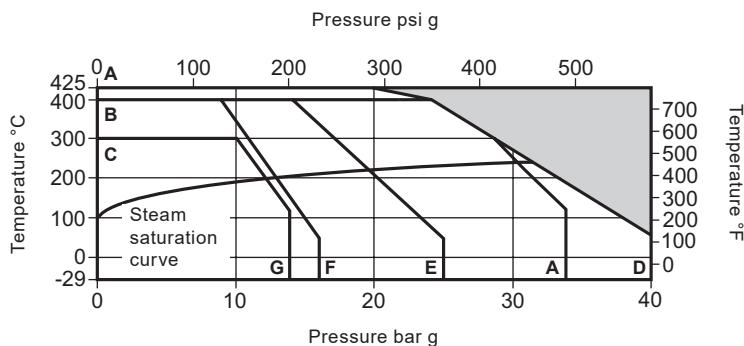

The product **must not** be used in this region.

**Fig 34 (DIN and JIS/KS)**

Body design conditions		PN40	
PMA	Maximum allowable pressure	PN40	40 bar g @ 50 °C (580 psi g @ 122 °F)
		PN25	25 bar g @ 50 °C (362 psi g @ 122 °F)
		PN16	16 bar g @ 50 °C (232 psi g @ 122 °F)
		JIS/KS 20	34 bar g @ 120 °C (493 psi g @ 248 °F)
		JIS/KS 10	14 bar g @ 120 °C (203 psi g @ 248 °F)
TMA	Maximum allowable temperature	PN40	400 °C @ 23.8 bar g (752 °F @ 345 psi g)
		PN25	400 °C @ 14.8 bar g (752 °F @ 214 psi g)
		PN16	400 °C @ 9.5 bar g (752 °F @ 138 psi g)
		JIS/KS 20	425 °C @ 20 bar g (797 °F @ 290 psi g)
		JIS/KS 10	300 °C @ 10 bar g (572 °F @ 145 psi g)
Minimum operating temperature		-29 °C	(-20 °F)

Designed for a maximum cold hydraulic test pressure of 1.5 x PMA of the connection of choice

The product **must not** be used in this region.

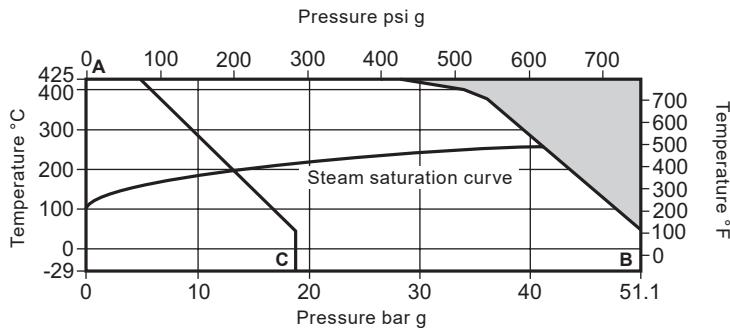

- A - A Flanged JIS/KS 20
- B - D Flanged EN 1092 PN40
- B - E Flanged EN 1092 PN25
- B - F Flanged EN 1092 PN16
- C - G Flanged JIS/KS 10

**Fig 34 (ASTM)**

Body design conditions		ASME 300		
PMA	Maximum allowable pressure	ASME 150	19.6 bar g @ 38 °C	(284 psi g @ 100 °F)
		ASME 300	51.1 bar g @ 38 °C	(741 psi g @ 100 °F)
TMA	Maximum allowable temperature	ASME 150	425 °C @ 5.5 bar g	(797 °F @ 80 psi g)
		ASME 300	425 °C @ 28.8 bar g	(797 °F @ 418 psi g)
Minimum operating temperature			-29 °C	(-20 °F)

Designed for a maximum cold hydraulic test pressure of 1.5 x PMA of the connection of choice

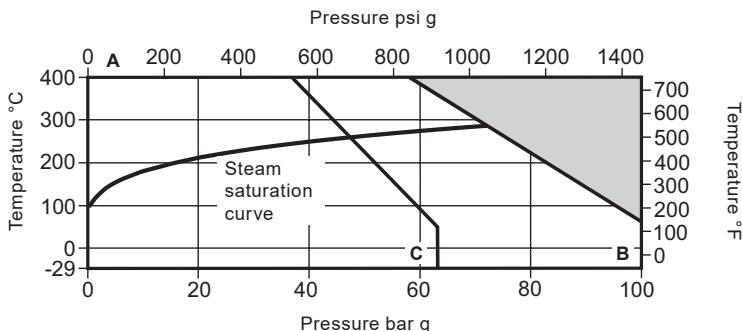

The product **must not** be used in this region.

A - A Flanged ASME 300

A - C Flanged ASME 150

**Fig 34HP (DIN)**

Body design conditions				PN63 and PN100
PMA	Maximum allowable pressure	PN63	63 bar g @ 50 °C	(914 psi g @ 122 °F)
		PN100	100 bar g @ 50 °C	(1 450 psi g @ 122 °F)
TMA	Maximum allowable temperature	PN63	400 °C @ 37.5 bar g	(752 °F @ 544 psi g)
		PN100	400 °C @ 59.5 bar g	(752 °F @ 863 psi g)
Minimum operating temperature				-29 °C (-20 °F)
Designed for a maximum cold hydraulic test pressure of:	PN63		95 bar g	(1 378 psi g)
	PN100		150 bar g	(2 176 psi g)

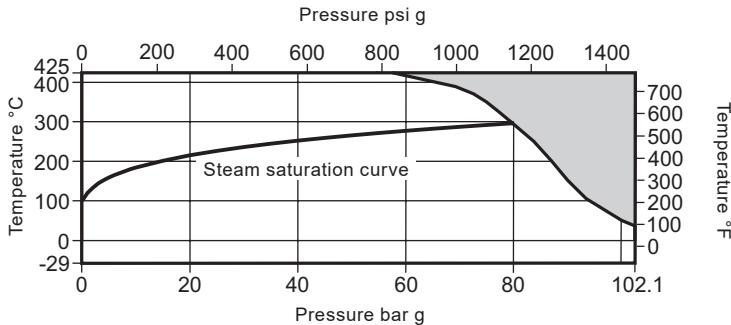

The product **must not** be used in this region.

A - B Flanged PN100

A - C Flanged PN63

**Fig 34HP (ASTM)**

Body design conditions			ASME 600
PMA	Maximum allowable pressure	102 bar g @ 38 °C	(1480 psi g @ 100 °F)
TMA	Maximum allowable temperature	425 °C @ 57.5 bar g	(797 °F @ 833 psi g)
Minimum operating temperature		-29 °C	(-20 °F)
Designed for a maximum cold hydraulic test pressure of:		152 bar g	(2 204 psi g)

The product **must not** be used in this region.

**Fig 36HP**

## 3. Installation

**Note:** Before actioning any installation observe the 'Safety information' in Section 1.

Referring to the installation and Maintenance Instructions, name-plate and Technical Information Sheet, check that the product is suitable for the intended installation:

- 3.1** Check materials, pressure and temperature and their maximum values. If the maximum operating limit of the product is lower than that of the system in which it is being fitted, ensure that a safety device is included in the system to prevent overpressurisation.
- 3.2** Determine the correct installation situation and the direction of fluid flow.
- 3.3** Remove protection covers from all connections and protective film from all name-plates, where appropriate, before installation on steam or other high temperature applications.
- 3.4** Strainers can be fitted on liquid or steam/gas systems in either horizontal pipework or vertical pipework where the flow is downward. In a horizontal line on steam/gases the strainer pocket should be in the horizontal plane as this reduces the possibility of waterhammer. On liquid systems the strainer pocket should point downwards.
- 3.5** The strainers may be lagged if required.

## 4. Commissioning

After installation or maintenance ensure that the system is fully functional. Carry out tests on any alarms or protective devices.

## 5. Operation

Strainers are passive items and will prevent the onward movement of dirt and debris, which is larger than the holes in the screen. The pressure drop across the strainer will increase as the screen becomes blocked. Regular cleaning/blowdown is recommended to keep the screen clean.

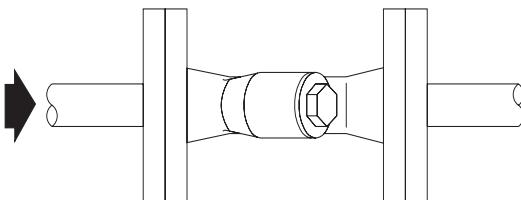

---

Fig 7, 33, 33.1, 34, 34HP, 36, 36HP, 37, 3616, Fig 3716 and Fig 3616 Food+ Flanged Strainers

## 6. Fault finding

Symptom	Possible cause	Remedy
<b>No flow through strainer</b>	Blocked screen	Clean or replace screen See Section 7.2
	System is isolated	Check isolation valves
<b>Increased pressure drop across strainer</b>	Screen is blocked up	Clean or replace screen See Section 7.2

Strainer installed on steam or gas

Strainer installed on liquid

# 7. Maintenance

**Note:** Before actioning any maintenance programme observe the 'Safety information' in Section 1.

## Warning

The cover gasket contains a thin stainless steel support ring which may cause physical injury if not handled and disposed of carefully.

### 7.1 General information

Before undertaking any maintenance on the strainer, it must be isolated from both the supply line and return line and any pressure allowed to safely normalise to atmosphere. The trap should then be allowed to cool. When reassembling, ensure that all joint faces are clean.

### 7.2 How to clean or replace the strainer screen:

For identification of parts refer to Section 8 'Spare parts'

- Remove the strainer cap.
- On most sizes up to DN25 the cap is simply unscrewed.
- On all other sizes the cap is retained by bolts/nuts. The number of bolts/nuts used will depend on the strainer size, material of construction and design rating.
- Once the cap is removed the strainer screen can be taken out.
- Clean the screen or replace with a new one.
- Reassemble the screen into the cap by pushing the end into the recess.
- Always fit a new strainer cap gasket ensuring the jointing faces are clean.
- Refit the strainer cap or bolts/nuts using 'Neverseize' compound and tighten to the recommended torque (refer to the relevant Table, pages 25 to 27).
- Ensure that the nuts are tightened equally before final torque is applied.
- Check for leaks.

## 8. Spare parts

The only parts that are available as spares are detailed in the table below.

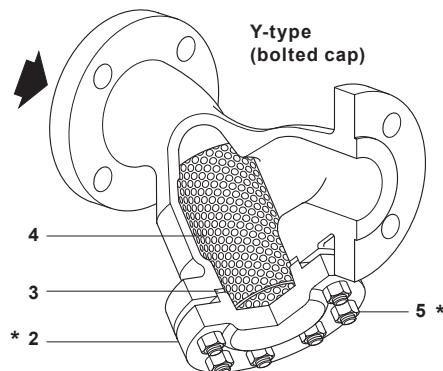

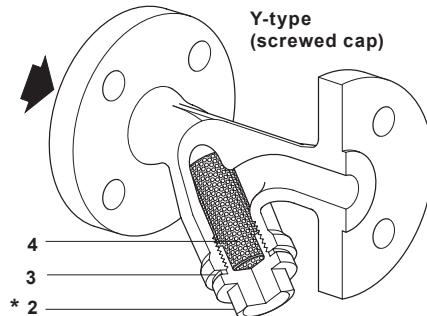

### Available spares

Strainer screen (stainless material, mesh, perforation and size of strainer)	4
<b>Note: The Fig 7 pot type is only available with 3.2 mm perforated stainless steel</b>	
Cap gasket (packet of three)	3

### How to order spares

Always order spares by using the description given in the column headed 'Available spares' and state the size and type.

**Example:** 1 off 100 mesh stainless steel screen for a DN100 Fig 34 steel strainer.

\* **Note:** Items 1, 2, 5, 6 and 7 are annotated for identification of parts relating to the tightening torques on pages 31 to 35.
