EMM Issue 5

Automatic or Manually Actuated Boiler Blowdown Valves DN15 to DN50

Description

The BBV is specifically designed for the removal of suspended/deposited solids and water from the bottom of steam boilers. The BBV is available in air-actuated and manual versions. The air-actuated version is supplied with a manual hand lever. The valve is spring-to-close on power failure and the manual version can easily be upgraded to an automatic version.

When used with a Spirax Sarco blowdown controller the automatic version provides timed control of blowdown, ensuring that the recommended blowdown occurs with the minimum of heat loss and avoids duplication and omissions.

The valve can be fitted with a mechanical switchbox. This can be linked to the blowdown controller or a BMS system to indicate when the valve has not closed. An optional ¼" 3-way solenoid valve may be directly mounted on the side of the actuator.

WARNING:

This product should only be used to purge boiler water containing non-metallic sludge and sediment within the pressure and temperature limits.

For optimum performance, ensure that TDS value is in accordance with the boiler's instructions.

Principal features:

- Easily upgraded from manual to automatic operation.
- Dedicated self-adjusting and self-cleaning spindle seals.
- Engineered for the specific application of bottom blowdown.
- Flow pressure assists closing.

Available types of boiler blowdown valve:

Air pneumatically actuated supplied with a manual actuation lever	BBV43 PN/M	Steel body
	BBV63 PN/M	Stainless steel body
	BBV83 PN/M	Alloy steel body
Manually actuated complete with a manual actuation lever	BBV43 M	Steel body
	BBV63 M	Stainless steel body
	BBV83 M	Alloy steel body

Please note: All of the 'M' versions can be automated to 'PN/M'.

Optional extras:

- Automatic bottom blowdown timer controller.
- Mechanical switch (with mounting kit).
- Pneumatic actuator upgrade kit.
- Physical lock kit.
- ¼" 3-way solenoid valve Option

Standards

This product range fully complies with the requirements of the Pressure Equipment Directive (PED).

Certification

This product is available with material certification to EN 10204 3.1.

Note: All certification/inspection requirements must be stated at the time of order placement.

Size and pipe connections:

DN15, DN20, DN25, DN32, DN40 and DN50

½", ¾", 1", 1¼", 1½", 2"

Flanged EN 1092 PN40, PN63 and PN100

Flanged ASME 300 and ASME 600

Other available options:

Butt weld

Socket weld

JIS/KS 30 and JIS/KS 40

For alternative connections to those stated opposite please contact Spirax Sarco.

BBV43 Pressure/temperature limits - EN 1092

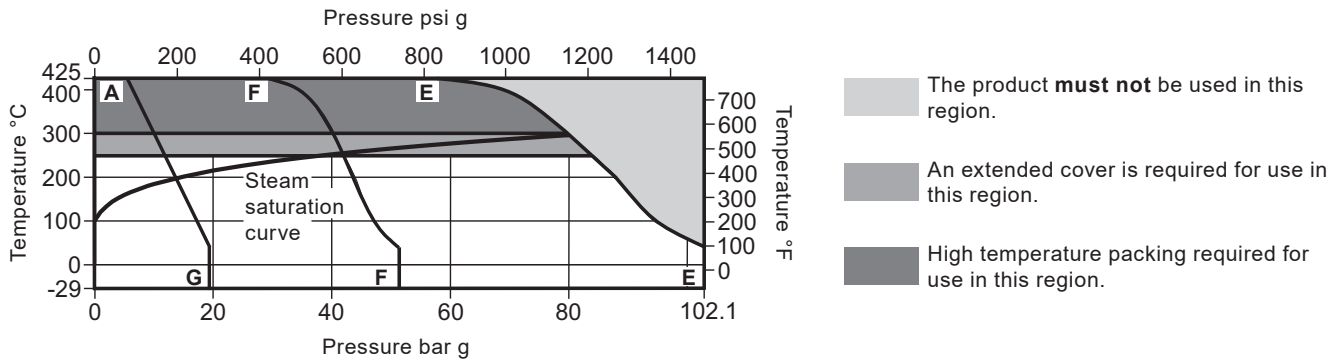

- The product **must not** be used in this region.
- An extended cover is required for use in this region.
- High temperature packing required for use in this region.

Notes:

1. Where the process fluid temperature is sub-zero and the ambient temperature is below +5 °C, the external moving parts of the valve and actuator must be heat traced to maintain normal operation.
2. When selecting a valve with a bellows scaled bonnet, the pressure/temperature limits of the bellows must be read in conjunction with the valve pressure/temperature limits shown in table below.

	Body design conditions	PN100
	PMA Maximum allowable pressure	100 bar g @ 50 °C
	PMO Maximum operating pressure	
A - B - B	TMA Maximum allowable temperature	400 °C @ 59.5 bar g
	Minimum allowable temperature	-29 °C
PN100	TMO Maximum operating temperature	Standard packing PTFE chevron (P) 250 °C @ 76.1 bar g High temperature packing (H) 400 °C @ 59.5 bar g
	Minimum operating temperature	-29 °C
	Design for a maximum cold hydraulic test pressure of:	156 bar g
	Body design conditions	PN63
	PMA Maximum allowable pressure	63 bar g @ 50 °C
	PMO Maximum operating pressure	
A - C - C	TMA Maximum allowable temperature	400 °C @ 37.5 bar g
	Minimum allowable temperature	-29 °C
PN63	TMO Maximum operating temperature	Standard packing PTFE chevron (P) 250 °C @ 48.0 bar g High temperature packing (H) 400 °C @ 37.5 bar g
	Minimum operating temperature	-29 °C
	Design for a maximum cold hydraulic test pressure of:	94.5 bar g
	Body design conditions	PN40
	PMA Maximum allowable pressure	40 bar g @ 50 °C
	PMO Maximum operating pressure	
A - D - D	TMA Maximum allowable temperature	400 °C @ 23.8 bar g
	Minimum allowable temperature	-29 °C
PN40	TMO Maximum operating temperature	Standard packing PTFE chevron (P) 250 °C @ 30.4 bar g High temperature packing (H) 400 °C @ 23.8 bar g
	Minimum operating temperature	-10 °C
	Design for a maximum cold hydraulic test pressure of:	60 bar g

BBV43 Pressure/temperature limits - ASME

Notes:

- Where the process fluid temperature is sub-zero and the ambient temperature is below +5 °C (+41 °F), the external moving parts of the valve and actuator must be heat traced to maintain normal operation.
- When selecting a valve with a bellows scaled bonnet, the pressure/temperature limits of the bellows must be read in conjunction with the valve pressure/temperature limits shown in table below.

	Body design conditions	ASME 600	
	PMA Maximum allowable pressure	102.1 bar g @ 38 °C	1480 psi g @ 100 °F
	PMO Maximum operating pressure		
A - E - E	TMA Maximum allowable temperature	425 °C @ 57.5 bar g	797 °F @ 834 psi g
	Minimum allowable temperature	-29 °C	-20 °F
ASME 600	TMO Maximum operating temperature	Standard packing PTFE chevron (P) High temperature packing (H)	250 °C @ 83.6 bar g 425 °C @ 57.5 bar g
			482 °F @ 1212 psi g 797 °F @ 834 psi g
	Minimum operating temperature	-29 °C	-20 °F
	Design for a maximum cold hydraulic test pressure of:	156 bar g	2 262 psi g
	Body design conditions	ASME 300	
	PMA Maximum allowable pressure	51.1 bar g @ 38 °C	740 psi g @ 100 °F
	PMO Maximum operating pressure		
A - F - F	TMA Maximum allowable temperature	425 °C @ 28.8 bar g	797 °F @ 418 psi g
	Minimum allowable temperature	-29 °C	-20 °F
ASME 300	TMO Maximum operating temperature	Standard packing PTFE chevron (P) High temperature packing (H)	250 °C @ 41.9 bar g 425 °C @ 28.8 bar g
			482 °F @ 608 psi g 797 °F @ 418 psi g
	Minimum operating temperature	-29 °C	-20 °F
	Design for a maximum cold hydraulic test pressure of:	77 bar g	1 117 psi g
	Body design conditions	ASME 150	
	PMA Maximum allowable pressure	19.6 bar g @ 38 °C	284 psi g @ 100 °F
	PMO Maximum operating pressure		
A - G	TMA Maximum allowable temperature	425 °C @ 5.5 bar g	797 °F @ 80 psi g
	Minimum allowable temperature	-29 °C	-20 °F
ASME 150	TMO Maximum operating temperature	Standard packing PTFE chevron (P) High temperature packing (H)	250 °C @ 12.1 bar g 425 °C @ 5.5 bar g
			482 °F @ 175 psi g 797 °F @ 80 psi g
	Minimum operating temperature	-29 °C	-20 °F
	Design for a maximum cold hydraulic test pressure of:	77 bar g	1 117 psi g

BBV43 Pressure/temperature limits - JIS/KS

Notes:

1. Where the process fluid temperature is sub-zero and the ambient temperature is below +5 °C, the external moving parts of the valve and actuator must be heat traced to maintain normal operation.
2. When selecting a valve with a bellows scaled bonnet, the pressure/temperature limits of the bellows must be read in conjunction with the valve pressure/temperature limits shown in table below.

	Body design conditions	JIS/KS40
	PMA Maximum allowable pressure	68 bar g @ 120 °C
	PMO Maximum operating pressure	
A - H - H	TMA Maximum allowable temperature	425 °C @ 40 bar g
JIS/KS 40	Minimum allowable temperature	-29 °C
	TMO Maximum operating temperature	Standard packing PTFE chevron (P) 250 °C @ 60 bar g High temperature packing (H) 425 °C @ 40 bar g
	Minimum operating temperature	-29 °C
	Design for a maximum cold hydraulic test pressure of:	156 bar g
	Body design conditions	JIS/KS30
	PMA Maximum allowable pressure	51 bar g @ 120 °C
	PMO Maximum operating pressure	
A - I - I	TMA Maximum allowable temperature	425 °C @ 30 bar g
JIS/KS 30	Minimum allowable temperature	-29 °C
	TMO Maximum operating temperature	Standard packing PTFE chevron (P) 250 °C @ 45 bar g High temperature packing (H) 425 °C @ 30 bar g
	Minimum operating temperature	-29 °C
	Design for a maximum cold hydraulic test pressure of:	156 bar g

BBV63 Pressure/temperature limits - EN 1092

Notes:

1. Where the process fluid temperature is sub-zero and the ambient temperature is below +5 °C, the external moving parts of the valve and actuator must be heat traced to maintain normal operation.
2. When selecting a valve with a bellows scaled bonnet, the pressure/temperature limits of the bellows must be read in conjunction with the valve pressure/temperature limits shown in table below.

ASME 150 and ASME 300

The spare parts available are shown in solid outline. Parts drawn in a grey line are not supplied as spares.

Note: When placing an order for spare parts please specify clearly the full product description as found on the label of the valve body, as this will ensure that the correct spare parts are supplied.

Available spares - BBV series

Actuator clamping nut		A
Gasket set	(Non-bellows sealed)	B, G
Stem seal kits	PTFE to Graphite conversion kit	C1
	Graphite packing	C2
Plug stem and seat kit	Fast opening trim	D1, E
	(No gaskets supplied)	

How to order spares

Always order spares by using the description given in the column headed 'Available spares', and state the size and type of valve including the full product description of the product.

Example: 1 - PTFE stem seal kit for a Spirax Sarco BBV43 PWSUSS DN25 PN40 control valve.

How to fit spares

Full fitting instructions are given in the Installation and Maintenance Instructions supplied with the spare.

Spare parts

PN63 and PN100 ASME 600 JIS/KS 30 and JIS/KS 40

The spare parts available are shown in solid outline. Parts drawn in broken line are not supplied as spares.

Note: When placing an order for spare parts please specify clearly the full product description as found on the label of the valve body, as this will ensure that the correct spare parts are supplied.

Available spares – BBV

Actuator clamping nut		A
Gasket set		B, G
Stem seal kits	Graphite packing	C1
Plug stem and seat kit	Fast opening trim (No gaskets supplied)	D1, E

How to order spares

Always order spares by using the description given in the column headed 'Available spares', and state the size and type of valve including the full product description of the product.

Example: 1 - Plug stem and seat kit for a Spirax Sarco BBV43 PWSUSS DN25 PN63 two-port control valve having flanged PN63 connections.

How to fit spares

Full fitting instructions are given in the Installation and Maintenance Instructions supplied with the spare.

BBV selection guide:

Valve series	BBV = Boiler blowdown valve	BBV
Body material	4 = Carbon steel	4
	6 = Stainless steel	
	8 = Alloy steel	
Connections	1 = Screwed	3
	3 = Flanged	
Stem sealing	P = PTFE	P
	H = Graphite	
Seating	W = Stellite	W
Type of trim	S = Standard trim	S
Trim balancing	U = Unbalanced	U
Bonnet type	S = Standard	S
Bolting	S = Standard	S
Valve size	= DN15, DN20, DN25, DN32, DN40 and DN50 = ½", ¾", 1", 1¼", 1½" and 2"	DN20
Connections For alternative connections to those stated please contact Spirax Sarco.	EN standard = Flanged EN 1092 PN40, PN63 and PN100	PN40
	ASME standard = Flanged ASME 300 and ASME 600	
	Butt weld	
	Socket weld	
Version	PN/M = Air pneumatically actuated supplied with a manual actuation lever	PN/M
	M = Manually actuated complete with a manual actuation lever	

Selection example:

BBV	4	3	P	W	S	U	S	S	DN20	PN40	PN/M
-----	---	---	---	---	---	---	---	---	------	------	------

How to order example: 1 off Spirax Sarco BBV43PWSUSS DN20 PN/M
