

CSF16 and CSF16T Stainless Steel Sterile Air Filters

Description

The CSF16 and CSF16T are horizontal, in-line high efficiency filters used to remove contaminate particles and bacteria from compressed air systems.

DN8 to DN80

DN100 and DN150

The filter housings are available in a choice of austenitic stainless steel and the material grades are defined in the table below. Also referenced is the surface finish and connection type that differ depending on the size of the housing.

Filter Housing model	Sizes	Material of Filter Housing (Bowl and Head)	Connection type (Bowl and Head)	Internal surface finish	External surface finish
CSF16, CF16LT*, CSF16H*	DN8 (¼") to DN80 (3")	1.4301 (304 stainless steel)	Food industry fitting to DIN 11851	Etched, Passivated and Polished Ra 0.8µm	Etched, Passivated and Polished Ra 1.6µm
	DN100 (4") and DN150 (6")		Nuts and Bolts		Etched and Passivated, Ra 5.8 micron
CSF16T, CF16LT*, CSF16HT*	DN8 (¼") to DN80 (3")	1.4404 (316L stainless steel)	Food industry fitting to DIN 11851	Etched, Passivated and Polished Ra 0.8µm	Etched, Passivated and Polished Ra 1.6µm
	DN100 (4") and DN150 (6")		Nuts and Bolts		Etched and Passivated, Ra 5.8 micron.

*In some pipe sizes the housing is available in a choice of low capacity designated 'L' and high capacity designated 'H'.

Replaceable borosilicate depth filter elements are available with a retention rate of >than 99.9998% related to 0.2 µm. For bacterial retention, Log Reduction Value (LRV) > 7/cm² for viruses and phages. These must be ordered separately to the filter housing.

Standards

These products fully comply with the requirements of the EU Pressure Equipment Directive 2014/68/EU and carry the  mark when so required.

Please note that all materials meet the requirements as stipulated by the US FDA Regulations.

Product variants that are PED Category 1 (Cat.1) are also compliant to PE(S)R and carry the  mark.

The complete product and component parts are, manufactured, assembled, tested and packaged in a facility verified and approved by an accredited registered body to ISO 9001:2015.

Certification

The CSF16/CSF16T can be supplied with material certification as per the table below.

Note: All certification/inspection requirements must be stated at the time of order placement.

Housing PED Category (SEP, Category I, Category II)	EN10204 Inspection Documents
SEP	No certification supplied
Cat. I	No certification supplied
Cat. II	Type 3.1 (Inspection Certificate) is supplied as standard

If type 3.1 certification is required for SEP or Cat. I Filter Housings, this must be ordered separately.

CSF16 and CSF16T air sizing:

The correction and sizing tables above are based upon compressed air in Nm³/h.

Nm³/h refers to the flow at normal conditions. Therefore, the calculated flow rate needs to be quantified before a selection can be made. The sizing scenarios below show how we calculate Nm³/h taking into consideration the operating air pressure and temperature and how this deviates from 'Normal conditions' which are defined as 1 bar abs and 20 °C.

CSF16 and CSF16T air sizing table

Please note that the flowrates displayed on the CSF16 and CSF16T air sizing table are based on an air pressure of 7 bar g.

	DN8	DN10	DN15	DN20	DN25	DN32	DN40	DN50L	DN50H	DN65	DN80L	DN80H
Size of unit	1/4"	3/8"	1/2"	3/4"	1"	1 1/4"	1 1/2"	2"L	2"H	2 1/2"	3"L	3"H
Maximum flowrate Nm ³ /h	60	90	120	180	270	360	480	720	1080	1440	1920	2880

Capacity correction factors for air pressure

Air pressure	bar g	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16
Correction factor		0.25	0.375	0.5	0.625	0.75	0.875	1.0	1.125	1.25	1.375	1.5	1.625	1.75	1.875	2.0	2.125

Sizing scenario 1:

Customer provides flow rate in m³/h (room temperature but at a given pressure)

Example conditions:

- Flowrate of air = 200 m³/h
- Air operating pressure = 4 bar (g)
- Air operating temperature = 20 °C (ambient)

Step 1:

Convert m³/h to Nm³/h

Nm³/h = Pressure (Abs) x Volumetric Flow (m³/h)

Nm³/h = 5 bar (Abs) x 200 m³/h

Nm³/h = 1,000

Step 2:

Identify the Capacity Correction Factor for a given operating air pressure using the Capacity Correction Factors for air pressure table

For 4 bar (g), correction factor is 0.625

Step 3:

Divide the calculated Nm³/h by the Capacity Correction Factor and select the housing size using the calculated flow value.

1,000 Nm³/h / 0.625 = Calculated Flow value = 1600 Nm³/h

Select 3"L (DN80L) with a maximum flow capacity of 1920 Nm³/h

Sizing scenario 2:

Customer provides flow rate in m³/h (air temperature above room temperature, >20 °C, and at a given pressure)

Example conditions:

- Flowrate of air = 200 m³/h
- Air operating pressure = 4 bar (g)
- Air operating temperature = 50 °C (elevated above ambient)

Step 1:**Convert m³/h to Nm³/h**

V₁ = Volumetric flow (m³/h) = 200

V₂ = Volumetric flow (Nm³/h) = to be determined

T₁ = Ambient temperature of air (Kelvin) = 20 °C + 273 = 293

T₂ = Elevated operating temperature of air (Kelvin) = 50 °C + 273 = 323

P₁ = Elevated operating pressure of air (Abs) = 4 bar g + 1 = 5

P₂ = Atmospheric pressure of air (Abs) = 0 bar g + 1 = 1

Solve to find V₂ (Nm³/h):

$$V_2 = (P_1 * V_1 * T_1) / (T_2 * P_2)$$

$$V_2 = (5 * 200 * 293) / (323 * 1)$$

$$V_2 = 907 \text{ Nm}^3/\text{h}$$

Step 2:**Identify the Capacity Correction Factor for a given operating air pressure using the Capacity Correction Factors for air pressure table**

For 4 bar (g), correction factor is 0.625

Step 3:**Divide the calculated Nm³/h by the Capacity Correction Factor and select the housing size using the calculated flow value.**

907 Nm³/h / 0.625 = Calculated Flow value = 1451 Nm³/h

Select 3"L (DN80L) with a maximum flow capacity of 1920 Nm³/h

Safety information, installation and maintenance

For full details see the Installation and Maintenance Instructions (IM-P180-42) which is supplied with the product.

How to order

The following information must be specified when ordering a Spirax Sarco CSF filter:

Maximum sterile air flowrate	m ³ /h
Maximum sterile air pressure	bar g
Allowable pressure drop bar	0.07 bar g maximum recommended
Housing material	1.4301 or 1.4404
Size *	DN or NPS (") and 'H' or 'L' where applicable
Pipe connections	PN10, PN16, Class 150, BSP or NPT
Element rating	0.2 micron
Filter housing seal or gasket material.	EPM for DN8 (¼") to DN80 (3")
	Stainless steel/PTFE filler for DN100 (4") to DN150 (6")
3.1 Certification for SEP and Category I filter housings	Yes/No

*** Note:**

For DN50, DN80 and DN100 the high capacity version is denoted by 'H' and low capacity by 'L'. For a 1.4404 housing version, the suffix 'T' must be added to the nomenclature e.g. CSF16T. DN150 size is only available in low capacity "L" housing.

Supply

The CSF16 and CSF16T filter housings are supplied separately to the filter elements.

1. The filter housing head and bowl with housing seal or gasket are packed in one carton, complete with EN 10204 3.1 certification where applicable documentation and installation and maintenance instructions.
2. The filter element complete with two seals.

Note: DN100 and DN150 CSF16 and CSF16T require multiple elements – See filter element selection table on page 9.

Note: The purpose of the filter is to remove (and retain) unwanted contamination. In time, the filter element will become saturated. To ensure a minimum downtime, we recommend that a spare filter element set is ordered at the same time as the CSF16 and CSF16T filter housing.

Example:

- 1 off Spirax Sarco DN20 CSF16 to pass sterile air at 4.0 bar g. Housing to be 1.4301 having NPT connections with EPM seals.
- 1 off CSF16-A 5/20 filter element
- 1 off CSF16-A 5/20 spare filter element set
- 1 off 3.1 Certification (for filter housing)

Spare parts

The spare parts available are shown in solid outline. Parts drawn in a grey line are not supplied as spares.

Available spares

CSF16-A filter element kit	5, 6 (2 off)
Seal kit	3, 6 (please see table below for quantities)

Seal kit contents

Unit size	Housing seal (Part number 3)	Element seals (Part number 6)
DN8 - DN80	1	2
DN100	1	6
DN150L	1	8

How to order spares

Always order spares by using the description given in the column headed 'Available spares' and state the size and type of filter housing, filter element rating and housing/filter element seal material required.

Example: 1 off CSF16 A filter element kit for a Spirax Sarco DN25 CSF16 sterile air, with EPM filter element seals.

Table 1 Recommended tightening torques

Item	Part	 or 	N m
4		use C spanner	As required
7	DN8 - DN80	6 mm Hex G1/4"	55
	DN100 and DN150L	A/F 42 G1"	138
10	DN100	A/F 30 M20	180
	DN150L	A/F 30 M20	260
