**TI-P664-05** TES Issue 5

## Spirax Sarco CSG-FBHP

# High pressure clean steam generation system for Food & Beverage

#### **Description**

Spirax Sarco has created a new range of steam generators to deliver food quality steam, specifically for direct injection processes within the food & beverage industry sector, where steam is considered as an ingredient. Primary heating medium is plant steam and the secondary steam should be generated from either de-mineralised or reverse osmosis quality water. All generators are supplied as packaged solutions ready to install and commission. Designed, manufactured and approved for Steam and Condensate applications. This product complies with EC1935:2004 Food Contact Materials. It also complies with regulation EC2023:2006 on good manufacturing practice for materials and articles intended to come into contact with food.

#### **Product range**

|------------------------|--------------|--------------------------------|--------------------|-------------------|--|
|                        | CSG FBHP-130 | maximum production capacity    | 1250 kg/h          | (2756 lbs/hr)*    |  |
|                        | CSG FBHP-185 | maximum production capacity    | 1800 kg/h          | (3968 lbs/hr)*    |  |
|                        | CSG FBHP-235 | maximum production capacity    | 2200 kg/h          | (4850 lbs/hr)*    |  |
| Size:                  | CSG FBHP-300 | maximum production capacity    | 2900 kg/h          | (6390 lbs/hr)*    |  |
|                        | CSG FBHP-375 | maximum production capacity    | 3500 kg/h          | (7716 lbs/hr)*    |  |
|                        | CSG FBHP-470 | maximum production capacity    | 4400 kg/h          | (9700 lbs/hr)*    |  |
|                        | CSG FBHP-600 | maximum production capacity    | 5300 kg/h          | (11685 lbs/hr)*   |  |
| Versions/Applications: | FBHP         | Food and Beverage steam inject | tion for high pres | sure applications |  |
|                        |              |                                |                    |                   |  |

(\*) max steam production at reference operating conditions: primary steam at 10.8 bar g (156.6 psi g), production at 8 bar g (116 psi g), feed water at 20 °C (68 °F).

#### **Construction and main features**

- System complete, functional and safe
- Compact design
- Modulating pressure and level control: pressure stability and steam quality improvement
- Intelligent PLC with SIMS technology, easy maintenance
- Packaged system with on board wired control panel: easy installation
- Automated start up/commissioning sequence
- Configurable options to suit individual needs
- System diagnostics
- Preventive maintenance
- Spirax Sarco's worldwide service.

#### Compliances available but not standard in all geographies

Note: Plant steam pressure must be sufficiently greater than clean steam pressure for clean steam production

<sup>\*\* 8</sup> bar g clean steam flowrates have been limited due to supply pressure. Higher capacity units can be considered as a bespoke.

#### Performance of the units (lbs/hr) (continued)

|              |                              | Clean steam pressure (psi g) |       |       |       |  |  |

Note: Plant steam pressure must be sufficiently greater than clean steam pressure for clean steam production

<sup>\*\* 116</sup> bar g clean steam flowrates have been limited due to supply pressure. Higher capacity units can be considered as a bespoke.

#### Dimensions and weights approximate in mm (inches) and kg (lbs) of a standard unit

|     |             | Dimensions<br>mm (inches) |             |              | Weights<br>kg (lbs) |              |  |

- \* If the Auto Plant Steam Isolation is selected, then this should be PN40
- \*\* Clean steam outlet connection is PN40 or PN25 on sizes 130, 185, 235, 300, 375 and 470, depending if the option of automatic clean steam isolation is selected. However, PN25 and PN40 flange connections on these sizes are interchangeable.

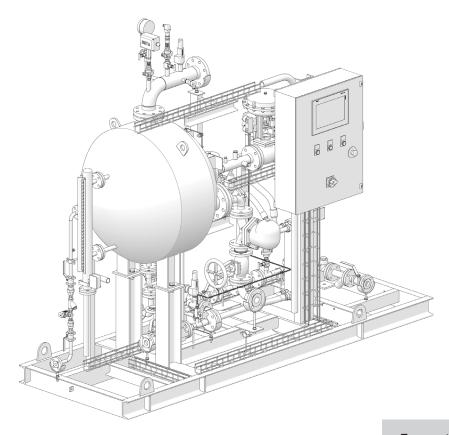

For imperial connections, see next page

<sup>\*</sup> If the Auto Plant Steam Isolation is selected, then this should be ANSI 300.

For metric connections, see previous page

### Product nomenclature and selection guide

The product nomenclature is based on the characteristics of the main elements and options, identified as follows:

| Design code             | E                         | EN   | E      |
|-------------------------|---------------------------|--|--------|
| Shell Type              | W                         | Welded – not openable  | w      |
|                         | 130                       | Up to 1250 kg/h (2756 lbs/hr)  |        |
|                         | 185                       | Up to 1800 kg/h (3968 lbs/hr)  |        |
|                         | 235                       | Up to 2200 kg/h (4850 lbs/hr)  |        |
|                         | 300                       | Up to 2900 kg/h (6390 lbs/hr)  | 130    |
|                         | 375                       | 375 Up to 3500 kg/h (7716 lbs/hr) 470 Up to 4400 kg/h (9700 lbs/hr)                      |        |
| Unit Size               | 470                       |  |        |
|                         | 600                       | Up to 5300 kg/h (11685 lbs/hr)   |        |
|                         | Plant steam<br>Kv<br>(Cv) | 10, 16, 36, 46, 63, 100, 160<br>(12, 18, 42, 53, 73, 116, 185)                           | 10     |
|                         | Feedwater<br>Kv<br>(Cv)   | 1, 1.6, 2.5, 4, 6.3<br>(1.2, 1.8, 2.9, 4.6, 7.3)   | 1      |
| Control Valve Actuation | PN                        | Pneumatic (fail safe)  | PN     |
|                         | EL                        | Electric (fail safe)   |        |
