

# Selection of Modulating Feedwater Valves Electrically Actuated

## Safety

Your attention is drawn to Safety Information Leaflet IM-GCM-10

### 1. Selection of the valve body size

Valve stem seals are available in normal (PTFE) or high temperature (graphite) material.

We recommend the use of the high temperature seal to decrease the possibility of leakage over long term use.

Valves with high temperature stem seals are suffixed 'H'.

The standard valve for modulating boiler water level control is DN40 (1½") nominal pipe size (40 mm).  
A range of seat sizes to suit this body is available to suit most sizes of boilers.

See page 2

For alternative sizes to the standard DN40 (1½")

See page 4

## 2. Selection of the valve body material and pressure rating

The valve body must be suitable for the maximum pressure and temperature in the feedwater line.

Standard valve types are as follows:

SG iron body	<b>KE71</b>	Screwed	PN25 rating (Pmax 25 bar g at 120 °C)
	<b>KE73</b>	Flanged	
Cast steel body	<b>KE43</b>	Flanged	PN40 rating (Pmax 40 bar g at 120 °C)

## 3. Selection of the valve K<sub>v</sub>

The DN40 valve body size is available with various seat sizes giving a choice of K<sub>v</sub> values.

Use the graph to select a suitable K<sub>v</sub> as follows:

- The feedwater flowrate is the actual maximum steam generation rate of the boiler plus any blowdown rate where this is significant. In practice the use of the 'from and at' boiler rating will give a small safety margin. In the example this is 15 000 kg/h.
- The pressure drop across the valve is the feedpump pressure at the maximum flowrate, minus the boiler pressure, minus any valve and pipework losses. In the example the available pressure drop is 1.5 bar.
- Select the larger K<sub>v</sub> value, 16 in this example. If right on the line, or if in doubt, select a larger K<sub>v</sub>.

## 4. Selection of the actuator + valve adaptor

The actuator has to be capable of shutting off against the maximum feedpump pressure when the boiler is not under pressure.

Select the actuator + valve adaptor from the table below:

<b>Actuator type</b>	<b>220/240 Vac</b>	<b>AEL52211JXA</b>	<b>AEL53211JXA</b>	<b>AEL54211JXA</b>			
	<b>110 Vac</b>	<b>AEL52212GXA</b>	<b>AEL53212GXA</b>	<b>AEL54212GXA</b>			
	<b>24 Vac</b>	<b>AEL52213FXA</b>	<b>AEL53213FXA</b>	<b>AEL54213FXA</b>			
	<b>24 Vdc</b>	<b>AEL52214FXA</b>	<b>AEL53214FXA</b>	<b>AEL54214FXA</b>			
<b>Size</b>	<b>K<sub>v</sub> value</b>	<b>Maximum feedpump pressure bar g</b>					
<b>Standard valve size DN40</b>	<b>25.0</b>	12.0	(8.5)	28.5	(25)	40.0	(40)
	<b>16.0</b>	19.8	(14.3)	40.0	(40)		
	<b>10.0</b>	38.3	(27.7)	40.0	(40)		
	<b>6.3</b>	40.0	(40.0)				
<b>Valve adaptor</b>		<b>AEL6911</b>	<b>AEL6911</b>	<b>AEL6911</b>			
<b>Mounting flange</b>		<b>EL5970</b>	<b>EL5970</b>	<b>EL5970</b>			

Figures in brackets denotes the differential pressures for valves fitted with high temperature graphite stem sealing. These valves have a suffix 'H'. Valve stroke is 20 mm. Actuator speed is 0.5 mm/s

## For alternative sizes to the standard DN40 (1½")

### 2. Selection of the valve body material and pressure rating

The valve body must be suitable for the maximum pressure and temperature in the feedwater line.

Standard valve types are as follows:

SG iron body	<b>KE71</b> Screwed	PN25 rating (Pmax 25 bar g at 120 °C)
	<b>KE73</b> Flanged	
Cast steel body	<b>KE43</b> Flanged	PN40 rating (Pmax 40 bar g at 120 °C)

Valve stem seals are available in normal (PTFE) or high temperature (graphite) material. We recommend the use of the high temperature seal to decrease the possibility of leakage over long term use. Valves with high temperature stem seals are suffixed 'H'.

### 3. Selection of the valve K<sub>v</sub>

Use the graph to select a suitable K<sub>v</sub> as follows:

- The feedwater flowrate is the actual maximum steam generation rate of the boiler plus any blowdown rate where this is significant. In practice the use of the 'from and at' boiler rating will give a small safety margin. In the example this is 15 000 kg/h.
- The pressure drop across the valve is the feedpump pressure at the maximum flowrate, minus the boiler pressure, minus any valve and pipework losses. In the example the available pressure drop is 1.5 bar.
- Select the larger K<sub>v</sub> value, 16 in this example. If right on the line, or if in doubt, select a larger K<sub>v</sub>.

### 4. Selection of the actuator + valve adaptor

The actuator has to be capable of shutting off against the maximum feedpump pressure when the boiler is not under pressure. Select the actuator + valve adaptor from the table below:

Actuator type	220/240 Vac	AEL52211JXA	AEL53211JXA	AEL54211JXA			
	110 Vac	AEL52212GXAX	AEL53212GXAX	AEL54212GXAX			
	24 Vac	AEL52213FXAX	AEL53213FXAX	AEL54213FXAX			
	24 Vdc	AEL52214FXAX	AEL53214FXAX	AEL54214FXAX			
Size	Kv value	Maximum feedpump pressure bar g					
Valve size	36.0	6.7	(4.7)	16.3	(14.3)	29.7	(27.2)
	25.0	12.0	(8.5)	28.5	(25.0)	40.0	(40.0)
DN50	16.0	19.8	(14.3)	40.0	(40.0)		
	10.0	38.3	(27.7)	40.0	(40.0)		
Valve size	16.0	19.8	(14.3)	40.0	(40.0)		
	10.0	38.3	(27.7)	40.0	(40.0)		
DN32	6.3	40.0	(40.0)				
	4.0	40.0	(40.0)				
Valve size	10.0	38.3	(27.7)	40.0	(40.0)		
	6.3	40.0	(40.0)				
DN25	4.0	40.0	(40.0)				
	6.3	40.0	(40.0)				
Valve size	4.0	40.0	(40.0)				
	1.6	40.0	(40.0)				
DN20	1.0	40.0	(40.0)				
	4.0	40.0	(40.0)				
Valve size	1.6	40.0	(40.0)				
	1.0	40.0	(40.0)				
Valve adaptor		AEL6911	AEL6911	AEL6911			
Mounting flange		EL5970	EL5970	EL5970			

Figures in brackets denotes the differential pressures for valves fitted with high temperature graphite stem sealing. These valves have a suffix 'H'. Valve stroke is 20 mm. Actuator speed is 0.5 mm/s
