Capacities

Capacities shown above are based on condensate at saturation temperature. Under start-up conditions when condensate is cold the internal bi-metallic air vent will be open and provides additional capacity to the main valve. The following table gives the minimum additional cold water capacities from the air vent on all sizes.

Note: The air vent closing temperature range = 120 °C to 135 °C.

For differential pressures less than 1.5 bar g, the additional cold water capacity is minimal.

ΔP (bar)	1.5	10	30	46	62
FTC62	Minimum additional cold water capacity (kg/h)				
46 bar version	20	426	536	800	
62 bar version	20	350	440	930	800
