

Description

The M40_iJ ISO are jacketed reduced bore ball valves, having a single piece body and ISO mounting as standard. They have been designed for applications that use heating fluid to maintain the product viscosity passing through the ball valve (e.g. chocolate, tar, fat and others). These valves are isolating valves, not control valves.

Note: The torque figures shown are for a valve that is frequently operated at the maximum operating pressure. Valves that are subject to long static periods, may require a greater break-out torque.

Safety information, installation and maintenance

For full details see the Installation and Maintenance Instructions supplied with the product.

Welding

Only the models that have connections designed for welding (SW, BW, Imperial Tube connections) should be welded. Valves with flanged connections must not be welded to avoid damages to the soft parts.

How to order

	Model	Seat material	Si = Carbon and graphite reinforced PTFE - PDR 0.8
Mode	woder	Seat material	Vi = Virgin PTFE
Specify	Body type		J = Jacketed body
	Matarial	De du meterial	2 = Carbon steel
	Material Body material		3 = Stainless steel

Example: 1 off Spirax Sarco DN50 M40ViJ2 ISO ball valve having flanged ASME 150 connections.

Optional extras:
